Partner Health Check – Support

1. Overview

The Partner Health Check – Support (PHC-S) dashboard provides a technical view of partner support operations, tracking SLA adherence, ticket volumes, and partner responsiveness. It is designed for support operations, partner managers, and technical leadership to monitor performance, optimize workflows, and identify SLA or efficiency risks.

2. Purpose

- Monitor partner support ticket trends and operational efficiency.
- Ensure SLA compliance for First Reply Time (FRT) and Resolution Time (RT).
- Track partner satisfaction and missed ticket resolutions.
- Enable proactive intervention for operational and SLA risks.

3. Data Sources

- **Ticketing System:** Partner support ticket logs.
- **SLA Records:** First Reply Time, Resolution Time, and SLA breach indicators.
- **Customer Feedback:** CSAT surveys.
- **Operational Metadata:** Ticket assignments, status, and partner details.
- **Tools:** Power BI for visualization, SQL for querying and data preparation.

4. Key Metrics / KPIs

- **Tickets per Month:** Monthly ticket volume per partner; identifies workload trends.
- **Total Tickets:** Total partner tickets over selected time periods; used for operational capacity planning.
- **First Reply Time (FRT):** Average time to respond to a ticket; SLA compliance indicator.
- **Resolution Time (RT):** Average time to resolve a ticket; operational efficiency indicator.
- **Customer Satisfaction (CSAT):** Aggregate partner satisfaction scores from surveys; quality measure.
- **Missed TRO:** Count of tickets breaching SLA or resolution targets; risk indicator.

5. Architecture & Technical Design

- **Data Pipeline:**
  - Extract: Partner ticketing system and SLA database.
  - Transform: SQL scripts calculate KPIs, normalize metrics, handle missing values.
  - Load: Power BI data model for interactive visualization.
- **Dashboard Views:**
  - **Live View:** Current ticket data and SLA compliance.

    - **Snapshot View:** Historical comparisons by week/month.
    - **Trend Analysis:** Time series for KPIs like FRT, RT, CSAT, and missed tickets.
- **Governance:**
    - Timestamped "Last Updated" metrics to ensure decision-making accuracy.
    - Validations on ticket counts, SLA thresholds, and CSAT entries.

6. Operational Features

- Drill-down from partner-level to ticket-level for root cause analysis.
- SLA alerting for tickets approaching breach thresholds.
- Performance trend visualization for monitoring partner efficiency.
- CSAT trend analysis to highlight at-risk partners or declining satisfaction.
- Predictive indicators for potential SLA violations.

7. Benefits & Use Cases

- **Proactive SLA Management:** Identify tickets at risk of SLA breaches.
- **Operational Efficiency:** Detect bottlenecks and optimize partner workflows.
- **Performance Monitoring:** Measure partner response and resolution efficiency.
- **Customer Satisfaction:** Track CSAT trends and address declining satisfaction proactively.
- **Data-Driven Decision Making:** Resource allocation, coaching, and escalation decisions informed by KPIs.

8. Conclusion

PHC-S is a technical monitoring and analytics solution that converts partner support data into actionable insights. It ensures SLA compliance, improves operational efficiency, and strengthens partner satisfaction. The dashboard provides teams with the visibility and control needed to maintain predictable and high-quality partner support operations.
